MATERIAL PROPERTIES

DYNEEMA® THE WORLDS STRONGEST FIBRE™

Specific Gravity - .97 Melt Point - 144-152° Tenacity - 30gpd

Dyneema® Fibre is one of the more common high performance fibres available on the market. Its high strength and low elongation and light weight make it the ideal braid for sheets, guys and control lines. It has excellent chemical resistance and UV resistance, although it tends to have a cover over the dyneema core, generally polyester, to increase its working life. The Dyneema® SK75, SK78, DM20 and SK90 yarn is the strongest fibre in our current range. Negatives in using Dyneema are the slippery nature of the fibre and the tendency to creep, i.e. Elongation under a prolonged load. Creep is much lower in SK78 and almost non existent in DM20.

VECTRAN™

Specific Gravity 1.41 Melt Point - 330° Tenacity - 23gpd

Vectran™ is a high performance fibre that is specifically designed for fixed load applications. It has a very high melting point and can withstand extreme temperatures, its high strength, low elongation and very low creep makes it ideal for Halyards. It has excellent cut resistance and has low moisture absorption. Its UV stability is poor, however its abrasion and cut resistance is much superior to polyester and it is used in extreme performance yacht braid covers

DYNICE™

Specific Gravity Melt Point -144°-152°

Dynice™ is a urethane coated heat set Dyneema or Spectra core and can come in a variety of urethane colours. With the urethane coating Dynice™ has excellent U.V, abrasion resistance and very low elongation. It has excellent tension and bending fatigue surpassing that of steel at common working loads. Its high strength and low weight make it suitable for ropes used in yachting applications halyards, sheets or any other application where a high performance rope is needed. It is often used with an outer cover, normally polyester, to extend its working life. Although it is heat set, it does still creep under extended load.

POLYESTER (TERYLENE,DACRON)

Specific Gravity - 1.38 Melt Point - 260°c Tenacity - 8.5gpd

Polyester is the most commonly used material in our range. It is also available in a wide range of colours and weights, the most common weights are 250, 500, 1000 & 1500 denier. It is resistant to U/V rays and all colours are colourfast. Prolonged exposure in water has little or no lasting effects. It has good abrasion resistance, especially when twisted. However it can not be dyed using normal dyeing methods. It has low stretch and used in all 5 & 6 series, sash cords, luff cords, HJ series and yacht braids; it is suitable for Halyards, Sheets, Reefing lines and control lines on cruising boats.

POLYPROPYLENE

Specific Gravity - .91 Melt Point - 165° Tenacity - 7.8gpd

Polypropylene is a light weight material that is used throughout the marine industry for rescue lines and anything else that requires a light weight floating rope. Its abrasion resistance is not equal to polyester and other yarns but it is U/V stabilised. It has excellent chemical resistance and does not retain water. It is good as a multipurpose rope but loses strength under heavy shock loads, it can be used for rescue lines and other general purpose uses.

NYLON (POLYAMIDE)

Specific Gravity - 1.14 Melt Point - 250° Tenacity - 8.9gpd

Nylon has a higher strength than polyester but also has more elongation. It tends to be used for fixed applications such as mooring lines or sea anchors. It has excellent abrasion resistance but tends to harden as the rope gets more worn. It can also be dyed using acid dyes.

TECHNORA (ARAMID)

Technora is a aramid fibre in the same family as kevlar. It is however more flexible, available undyed with a marine finish to improve abrasion resistance or matt black to improve UV resistance.

KEVLAR (ARAMID)

Specific Gravity -1.44 Melt Point -Chars at +450°

The original high tech fibre, it has exceptional strength for a low weight fibre that can be up to 5 times stronger than steel on an equal weight basis. Kevlar is extremely heat resistant and has exceptional cut resistance; it is used in bullet proof vests for this reason. It is unaffected by water and is also used in the construction of mooring lines and elevator cables. It has little creep and low elongation and is best kept away from alkaline conditions or exposed to chlorine. The main negatives is poor point loading and poor U.V resistance.

COLOUR EXAMPLES SHOWN AS A BASIC GUIDE ONLY

BREAK LOADS

Break loads have been achieved in laboratory conditions. Break loads of Advantage, Premier, FX & V Series have been achieved using long splices at both ends.

Because of the large amounts of ropes and working applications it is not possible to make absolute recommendations.

In general for non critical applications nominal work loads of 10-20% is considered acceptable.

Critical applications would require professional analysis of all conditions.

CJ660	6 mm	100/200m	650	2.40

POLYESTER

16 Carrier smooth construction, high tenacity UV stabilised polyester core and cover. Solid white, black and colours.

Applications - General purpose, tying and whipping, mouse line, Blind draw cord, leech line.

SASH CORD

Product	Size	Spool	Weight /100mts (kg)
No.3 HL	3 mm	150m	0.57
No.4 HL	3.5 mm	150m	0.72
No.5	4 mm	150m	1.20
No.5 HL	4 mm	150m	1.21
No.6	6 mm	150m	2.50
No.7	6.4 mm	150m	2.84
No.8	7 mm	150m	3.27
No.9	7.8 mm	150m	4.11
No.10	9 mm	100m	5.31

POLYESTER

Solid braid construction high tenacity UV polyester, excellent general purpose braid available in solid black and white. Not suitable for high loads., Although excellent for Sash Windows.

Easy for knotting and unknotting.

Applications - Window sash cord, motor starter cord.

DOCKLINE

Product	Size	Spool	Approx B/Load (kg)	Weight /100mts (kg)
YN10	10mm	100m	2000	6.00
YN12	12mm	100m	2800	9.05

YN16	16mm	100m	6000	15.3
YN18	18mm	100m	6500	20.0
YN20	20mm	100m	7500	22.0
YN24	24mm	100m	8200	32.4

NYLON

100% UV Stabilized nylon, black outer cover, high elongation, easy to splice and handle. Available in cut lengths on request for larger sizes.

* Tested with both ends spliced

Applications - Mooring, Anchoring, Docking.

LITE LINE

Product	Size	Spool	Approx B/Load (kg)	Weight /100mts (kg)
YP6	6mm	100m	550	2.00
YP8	8mm	100m	750	3.60
YP10	10mm	100m	1200	5.20
YP12	12mm	100m	1500	6.80

POLYPROPYLENE

100% multi filament polypropylene. Floating rope. Same construction as classic yacht braid. Not suitable for shock loading.

Applications - Lite tow line, general purpose sailing dingy line.

LUFF CORD

Product	Size	Spool	Weight /100mts (kg)
CJ632HL	3.2mm	500m	0.76
CJ640HL	4mm	300m	1.21
CJ648HL	4.8mm	300m	1.73
CJ657HL	5.7mm	300m	2.65
CJ664HL	6.4mm	300m	2.98
CJ680HL	8mm	200m	4.90
CJ910HL	10mm	200	7.00
CJ913HL	13mm	100m	

POLYESTER

Tightly picked 100% polyester braid, extremely rigid for use in sail making luff cord.

Special sizes made to order.

HJ SERIES

Product	Size	Spool	Weight /100mts (kg)
HJ8	8mm	100m	2.44
HJ10	10mm	100m	3.19
HJ12	12mm	100m	5.27
HJ14	14mm	100m	7.30
HJ20	20mm	100m	12.0

POLYESTER

Braided high tenacity UV stabilised polyester without a core, perfect for horse/dog leads etc, and a low cost winch braid. White and colours on request. Easy to splice.

Applications - Dog, horse leads, Inflatable boat soft grip handles. Light load winch rope and Fender lines.

HAURAKI FENDERS

Product	Size (mm)	Weight (kg)
HFS	300 x 800	1.7
HFM	350 x 1000	2.5
HFL	400 x 1200	3.1

FENDERS

Fenders big enough to protect your boat properly, and small enough to stow away easily.

Constructed from light grey, heavy duty, 1.2mm thick PVC fabric.

The seams are heat welded together with doubler tapes in a controlled environment to ensure a strong, high quality join is achieved.

DYNEEMA® SK78 FIBRE CORE - POLY COVER

High performance Dyneema® Fibre SK78 HDPE core and 100% high tenacity polyester cover. Double braid construction with high strength and low stretch. Option to coat the core with a urethane coating which includes Titanium dioxide particles to help improve cut resistance and abrasion plus increased UV protection.

12 Carrier core - 24 Carrier cover.

• Available in traditional colour

Applications - Halyards, Sheets, Control Lines, Vang, Reefing and furling systems, Out/downhaul.

VECTRAN® CORE - POLY COVER

Designed for the performance racer,

FINELINE™ Premier uses a liquid crystal polymer Vectran® core and 100% polyester high tenacity cover.

Option to coat the core with a urethane coating which includes Titanium dioxide particles to help improve cut resistance and abrasion plus increased UV protection.

Features • 16 Carrier Vectran® core
• 24 Carrier 100% high tenacity polyester.

Applications - Low stretch and zero creep make vectran ideal for halyards and other fixed load applications.

POLYESTER COVER DYNICE CORE

Polyester cover - Choice of solid colour or fleck.

UV Stabilized.

Choice of Dynice 75 or Dynice DUX 75 core

NOTE Non Stock item - lower strength by 10% if spliced. Larger diameter on request.

* See performance cores for Dynice specs

Pre-stretched braided rope with ultra high breaking strength

The Dynice Dux 75 is a new generation of ultra high performance ropes. It is far stronger than Dynice 75 by at least 20% up to 43% in the smaller diameters.

Applications - Halyards, runners, strops, high load purchase systems, Checkstays, Winch lines.

HOT KNIFE

ENGEL HSG-O 220V

The Engel hotknife is a great tool for cutting for rope, webbing, synthetic fabrics and other materials that would unravel when cut with scissors.

The Hotknife is trigger operated and heats up quickly (6-8 Seconds). It also has a light to illuminate the cutting area.

The Type R Blade is replaceable and easy to change.

FINELINE[®] CABLES

HIGH PERFORMANCE
TORSIONAL & TENSION
CABLES

WITH **STRATIS**furl

Designed by the same expert team behind the STRATIS sail range, Fineline Cables with STRATISfurl high performance torsional and tension cables are a market-leading product that perfectly complements any sail package

FINELINE[®] CABLES

WITH **STRATISfurl**

Fineline Cables with **STRATISfurl** was designed to fill a hole in the market for a cost effective high quality furling cable. The Doyle Group is often asked to supply a complete sail package to customers and the logical step for furling cables was to start building these in-house, considering so much of the infrastructure was already produced at their world-class facility. Applying the same technology and expertise that created the Stratis sail range, and drawing on Fineline's Braiding experience and the expert knowledge of Doyle's in-house specialist rigging team, the Fineline Cable STRATISfurl range is a market-leading performance focused solution that perfectly complements any sail package.

MATERIALS

Fineline Cables with STRATISfurl use four types of core material, depending on the application:

- ▶ PBO
- ▶ Dyneema
- ▶ Vectran
- ▶ Kevlar

Kevlar, Vectran and Dyneema are primarily used for lower loads.

PBO is used for the higher loads/higher performance cables.

THE CONSTRUCTION PROCESS

Our experienced team creates the cable range using a specialist construction process in house:

- ▶ Both thimbles are set at the desired build length.
- ▶ The fibres are then taken off spools and continuously wound around the thimbles under tension. When the desired number of laps is reached the ends are terminated, forming a continuous loop bundle.
- ▶ The fibres are then wrapped in tape to minimize the diameter and give them UV and water resistance.
- ▶ Braiding then takes place. Depending on the cable application the cable is over-braided several times.
- ▶ Each braid is resin-coated together using a rubber based resin, allowing the cable to bend, stretch and be coiled up without losing its ridged format or its torque properties.
- ▶ The cable is then put back on the build pins and set to its build length for the resin to cure.

CAPABILITIES

Using the construction process detailed above the following cables can be built:

- ▶ Torque cables (Top/down, Bottom/up, Tension luff cable).
- ▶ Runners.
- ▶ Bobstays.
- ▶ Head-stay strops etc.

BRAIDING

Our 48 carrier, advanced horizontal braiding machine is capable of braiding with any desired material from 4mm to 40mm in diameter. The Cables can get five over-braids done in one continuous go without stopping the machine. Automated caterpillar wheels keep the cable under continuous tension to allow this to happen. This whole process was designed in-house by Doyles expert team using the same technology utilized in the Stratis loft.
